

rain:play

Welcome to RainPlay!

Now you can enjoy your piano or keyboard to the full with this exciting new device.

1: Installing RainPlay on your piano or keyboard

RainPlay is supplied with rubber feet in two sizes to accommodate most keyboards. Simply select the two feet most appropriate for your keyboard and position them on each end of RainPlay.

Carefully position RainPlay on your keyboard or piano behind the keys.

2: Connecting RainPlay to your computer

Simply connect RainPlay to your computer via the included USB cable. No drivers are needed, RainPlay is ready for operation!

3: Configure your MIDI software for RainPlay

RainPlay responds to MIDI (Musical Instrument Digital Interface) messages transmitted by your favourite MIDI compatible software. We love and recommend Synthesia!

For a step-by-step guide to setting up RainPlay with Synthesia, please visit:
<http://www.rainplay.net/setup>

The same principle applies to all MIDI compatible software.

4: RainPlay Controls

The two thumb wheels on RainPlay's end panel allow real-time adjustment of LED brightness and speed of descent.

Test mode: before connecting RainPlay to your computer, rotate both thumb wheels to their top most position. This feature is useful for aligning the device with the keys on your piano or keyboard.
